

DESIGN MEETS
DURABILITY

evermite[®]

MARMITE IS A LEADER AMONG MANUFACTURERS OF BATHROOM EQUIPMENT

Marmite is a leading European manufacturer of bathroom equipment that brings together natural mineral materials and sophisticated technology. Marmite owes its reputation and strong position on the market to the high quality of its products, which are available worldwide in the product ranges of acknowledged manufacturers of bathroom furniture and specialised chain stores.

The secret of the company success lies in its modern approach to the process of product creation in which – starting from the design stage – the customer's expectations and suggestions are the most valued. Thus, customers become co-creators, since the entire manufacturing process stems from their experience and needs.

Marmite sets great store by the continuous development of its products. That is why the company actively pursues innovation in materials, technology and design, frequently establishing new trends in the industry.

BASIN IN THE BATHROOM
IS AN UNIQUE
PIECE OF EQUIPMENT

Everyday the basin undergoes a number of durability tests. All members of the household use it – adults and children – and not always for the purpose it was intended.

Such intensive usage entails a risk of depleting the original quality of the product. Attempts at bringing the basin back to its original impeccable state might lead to resistant stains, scratches or defects of the surface.

To meet these demands, Marmite developed innovative material that uniquely combines design flexibility with durability. This is Evermite.

EVERMITE MAKES THE BASIN LOOK BRAND
NEW FOR LONGER AND GIVES THE CUSTOMER
FREEDOM IN EVERYDAY INTENSIVE USE.

INNOVATIVE
MATERIAL THAT COMBINES
DESIGN FLEXIBILITY WITH
DURABILITY

Evermite was created using a modified polymer basis, which makes basins more durable and resistant than composite basins covered with standard gelcoats. A unique formula of components builds a protective barrier, thus minimising the risk of use-related defects.

Evermite's exceptional functional qualities have been confirmed through a series of tests carried out by independent research laboratories and certification centres:

ITB POLAND, VTT Finland, IAPMO USA.

RESISTANCE TO ABRASION

RISK: LITTLE SCRATCHES FROM CLEANING
OR PLACING CUPS AND ACCESSORIES

EVERMITE IS 40% MORE RESISTANT TO ABRASION

After years of use, the surfaces of many basins have tiny scratches caused by cleaning or being rubbed by cups, soap dishes or beauty products. According to tests, Evermite is 40% more resistant to abrasion than other similar materials. This is possible thanks to the modified polymer basis used in Evermite.

Evermite lets you enjoy a flawless surface for longer.

RESISTANCE TO SCRATCHES

RISK: ACCIDENTAL SCRATCHES

EVERMITE IS 20% MORE RESISTANT TO SCRATCHING

Evermite contains special microparticles that build up a surface protecting the basin against accidental scratches. The tougher material offers better resistance to defects. Thanks to this, Evermite is 20% more resistant to scratching. In short, Evermite marries modern design with durability.

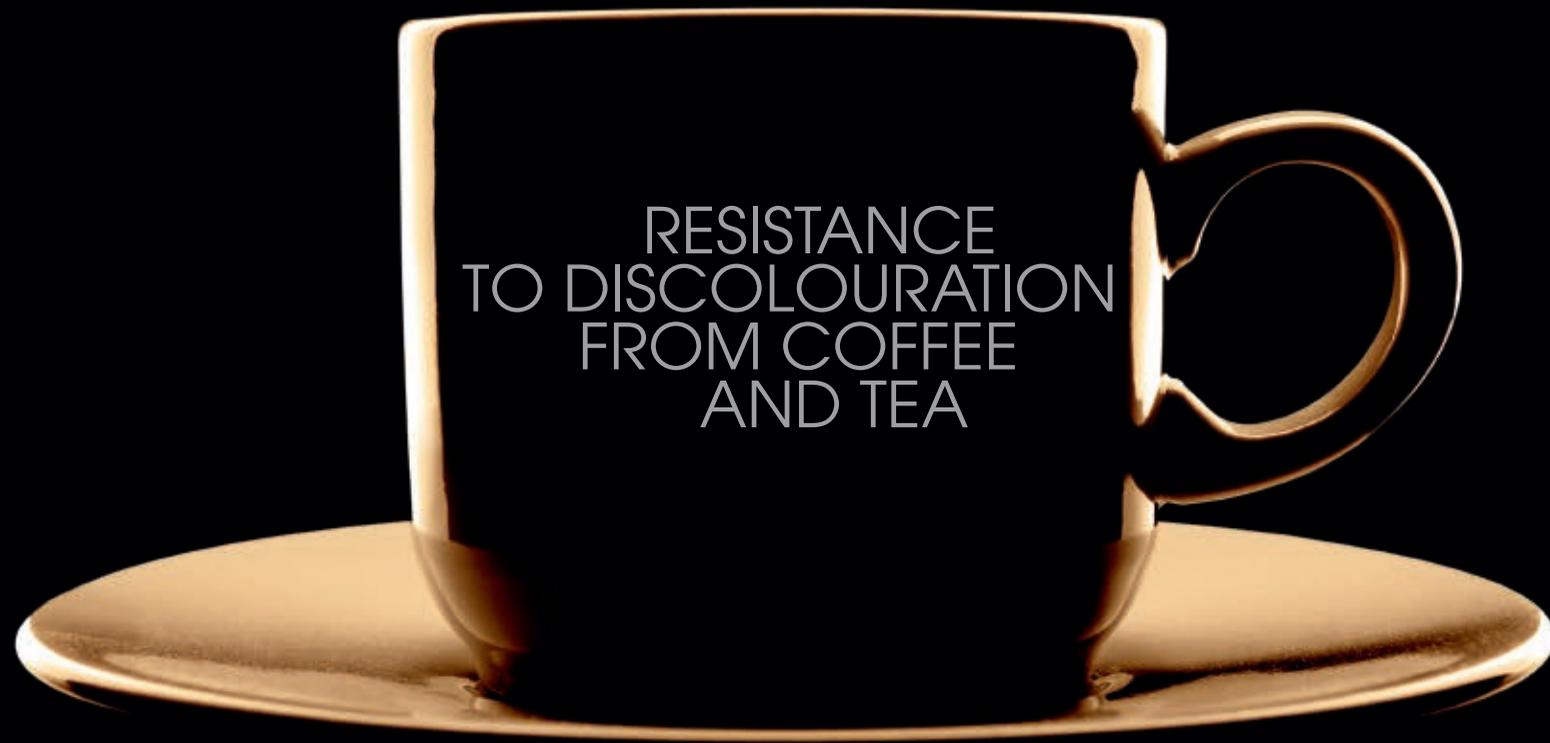

RESISTANCE TO GLOSS FADING

RISK: LOSING THE ORIGINAL LUSTRE

EVERMITE IS 50% MORE RESISTANT TO LUSTRE FADING DUE TO CLEANING

Thanks to Evermite, a basin retains the original qualities of its surface for many years. Laboratory tests have demonstrated that Evermite is 50% more resistant to lustre fading due to cleaning. Evermite's structure is designed to protect against micro-defects so the basin remains as glossy as on the day of purchase for much longer.

RISK: TEA, COFFEE, LIPSTICK

**COFFEE, TEA, AND OTHER PRODUCTS
USED AT HOME CANNOT STAIN
THE SURFACE PERMANENTLY**

Evermite is characterised by a very low permeability coefficient. As a result, the surface of the basin is perfectly smooth, which prevents stains from becoming ingrained and makes maintenance easier.

The material is resistant not only to marks from tea or coffee, but also to stains from various, hard-to-clean products used in the household, for example: lipstick, shoe polish, crayons, ink, vegetable and fruit juice, medicines like gentian violet or iodine. Discolouration does not leave any trace.

If the stain is recent, a sponge and some water suffice to remove it. If the stain has stayed on the basin for a longer time, a sponge and some regular cleaning cream will clean it. Proof – Evermite has been successful in strict European and American tests (CE, ANSI and CSA) and it has passed internal corporate stain resistance tests.

RESISTANCE TO DISCOLOURATION FROM TOBACCO

RISK: TOBACCO OR
STRONG CHEMICALS

THE INFLUENCE OF DIFFICULT TO CLEAN SUBSTANCES DOES NOT RESULT IN PERMANENT DISCOLOURATION

Evermite is highly resistant to tobacco stains and discolouration from strong chemicals, including: petrol, ethanol, amyl acetate, ammonium hydroxide, citric acid, urea, hydrogen peroxide, sodium hypochlorite, toluene, ethyl acetate, lye, and acetone. Evermite has successfully passed the CE, ANSI and CSI certification tests proving its resistance to these substances. Contact with these substances does not affect the product's quality.

Removing stains resulting from a lit cigarette left on an Evermite basin is very easy – just apply some regular cleaning cream. Such resistance to stains makes Evermite basins also suitable for public facilities. Stains from strong chemicals can be removed with cream cleanser. If the gloss is dimmed or if the stain is difficult to remove, polishing the wet surface first with P1200 waterproof sandpaper and then with some cream cleanser will solve the problem.

EASY MAINTENANCE THANKS TO EVERMITE

RISK: SOAP, TOOTHPASTE, LIME

THE UNIQUE COMPOSITION OF EVERMITE FACILITATES REMOVAL OF STAINS RESULTING FROM USE

The unique composition of Evermite facilitates removal of stains resulting from everyday use. The key to success?

A perfectly smooth surface and low permeability which prevent lime and water or soap residues from settling on Evermite basins.

The smooth surface also keeps bacteria at bay, making the bathroom a safe and friendly place. Another benefit is reduced water use and cost of cleaning products.

evermite[®]
IS COMPLETELY SAFE
FOR USERS AND
ENVIRONMENTALLY FRIENDLY

Marmite's Swedish origin is a hallmark of high quality, refined design and respect for nature. Evermite basins outdistance competitors' products in their resistance to scratches, abrasion, lustre fading, discolouration and difficult stains.

Evermite offers a unique combination of design flexibility and durability that makes it a better alternative to porcelain across a broad range of applications.

POSSIBILITY TO REPAIR THE SERIOUS DAMAGE

Evermite is manufactured in cast marble technology.

It gives a unique possibility to repair basins in case of serious damage. Glass bottles or other heavy bathroom appliances if dropped might completely destroy basins from other materials.

Evermite basins will last longer with its original quality.

The repair kit delivered by manufacturer or distributor lets the final user bring back the original state of the product in 20 minutes.

ENDLESS
POSSIBILITIES

Thanks to its unique properties, Evermite creates a resistant and glossy surface. We developed material that is suitable not only for washbasins but also for bathtubs. Each of our bathtubs brings unquestionable style and appeal to your bathroom's interior. Evermite gives you the confidence that your bathtub will look like new for years.

WARRANTY AND CERTIFICATES

WARRANTY

All Evermite products carry a 10 year warranty against faulty manufacture. Conditions for validity of the warranty are normal use, as well as installation by a qualified professional. Air bubbles on the underside of products are excluded from this warranty.

VERIFICATION OF TECHNICAL FEASIBILITY

In order to ensure the highest quality, Marmite reserves the right to verify the suitability of Evermite for new and existing product applications.

CERTIFICATES

As confirmed by appropriate certificates, Evermite complies with safety and legal standards of the European, American and Canadian markets. Introducing the product into the American or Canadian market requires a certificate for every new Evermite product. The party responsible for certification is the exporter.

> CE/EN COMPLIANT WITH EN 14688. CE MARKING.

> ANSI AND CSA. 'CUPC' MARKING
