KBIS LAS VEGAS
JANUARY 21-23
2020

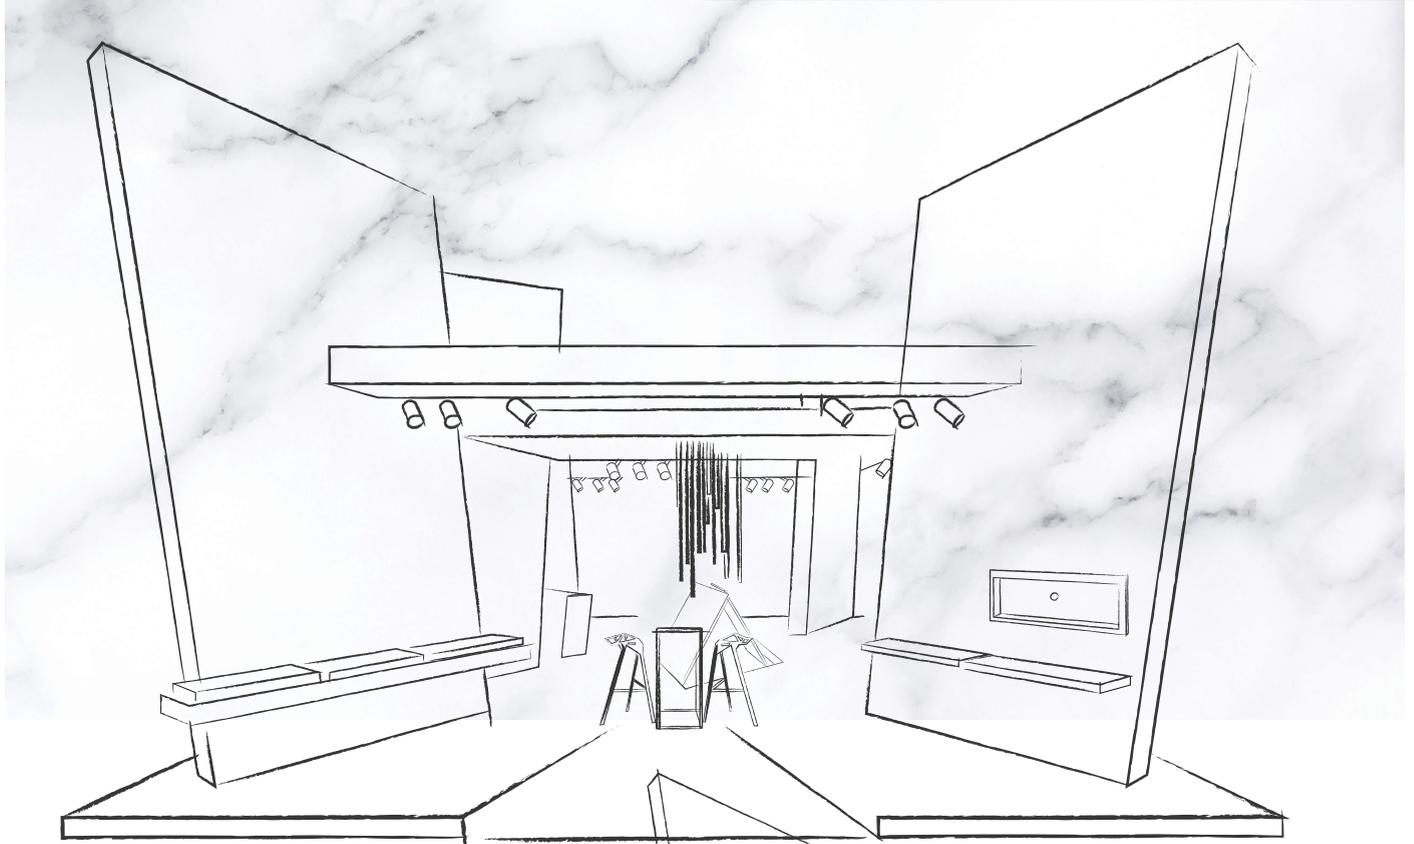

Dear Visitor,

**It is our great pleasure
to take part in one of
the largest trade fairs
which is dedicated to all
aspects of kitchen and
bathroom design:
KBIS in Las Vegas.**

In this edition we present new products, including innovational shower pan solutions, free-standing bathtubs and sink collections.

Our exhibition stand speaks for itself, telling the real story of our products.

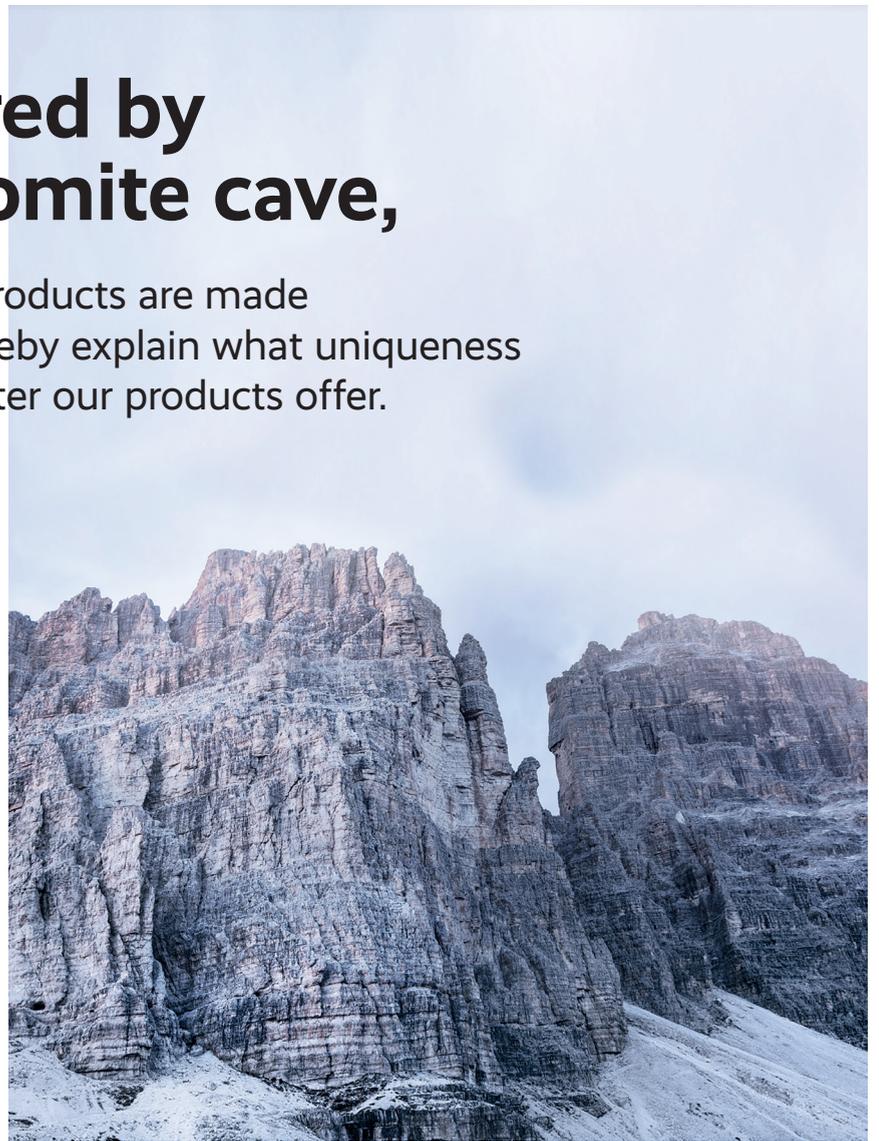

The stand architecture is centered around a natural stone sculpture.

Inspired by a dolomite cave,

what our products are made
of and thereby explain what uniqueness
and character our products offer.

Contrasting the rough aesthetics of
natural stone with the slim, elegant
style of our range, we explain how
rock that was formed millions of years
ago is turned into resistant, beautiful
and modern products.

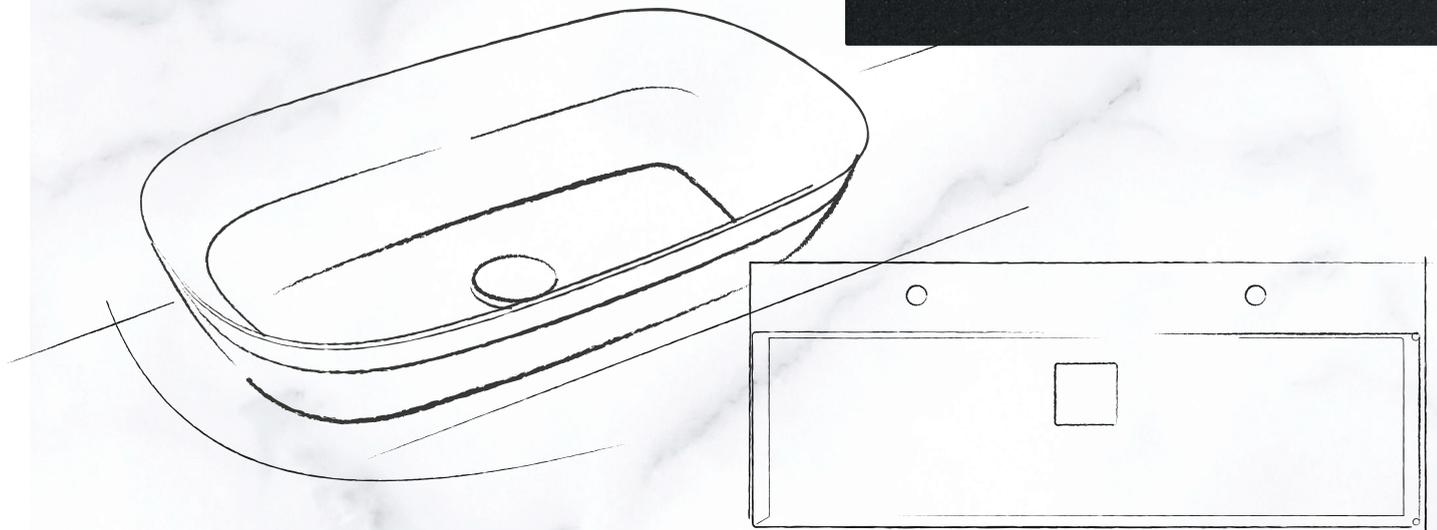

Our material, 'Mineral Composite' comes from nature. Its main ingredient is dolomite rock, which was formed over 250 million years ago when the Earth witnessed increased volcanic activity.

Dolomite sedimentary rocks were covered by layers of magma. High temperatures and enormous pressures recrystallized original minerals. Due to metamorphic processes the dolomite marble gained beauty and toughness.

The combination of dolomite and elastic resin imparts unparalleled durability and impact-resistance to Mineral Composite. The resin also provides unlimited possibilities for moulding products made from this technology.

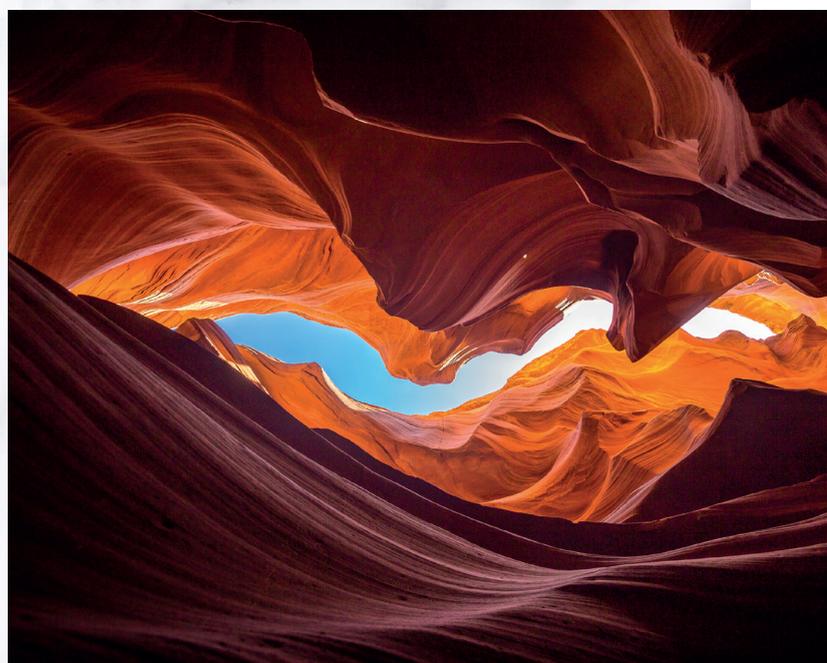

Our designs are driven by constant attention to the structures and colors that we select. When we are creating products we are inspired by the beauty and richness of nature.

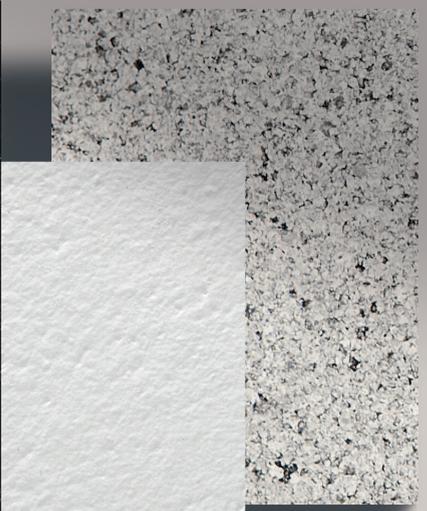

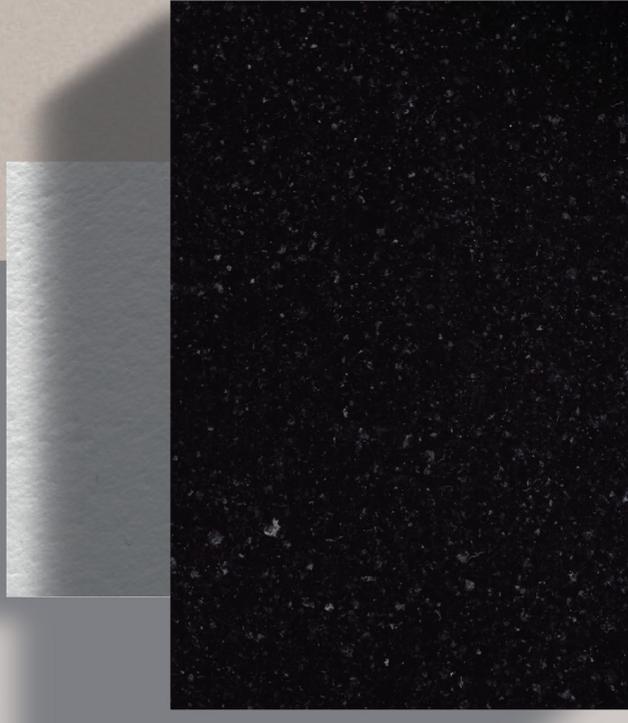

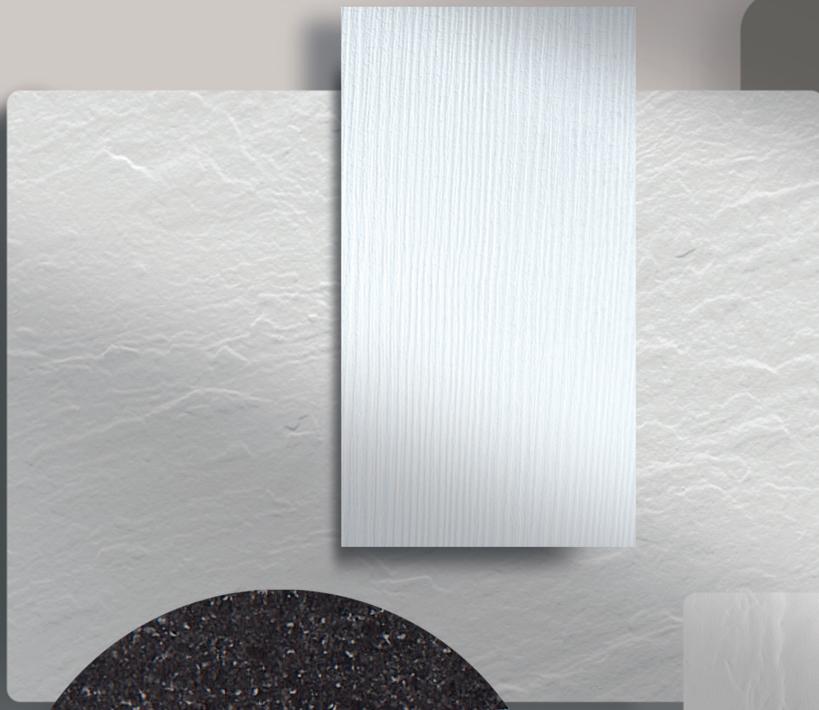

Thanks to the unlimited design possibilities, Mineral Composite allows us to create products of any shape, color and finish.

Our colors and structures have been inspired by natural materials, giving our products a unique character to perfectly match the décor of a modern bathroom.

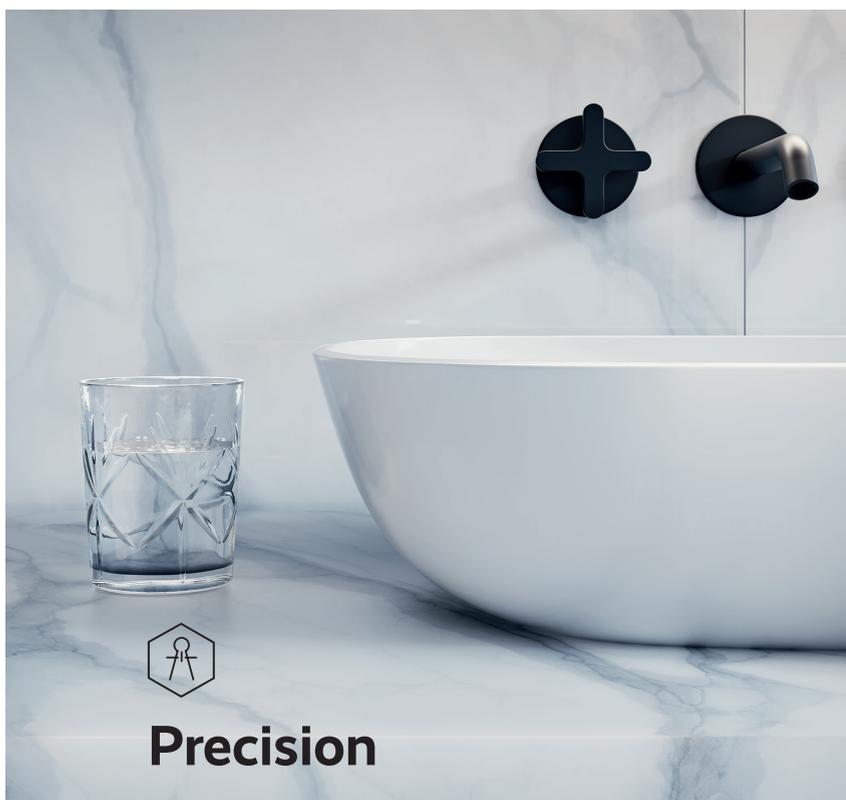

MINERAL COMPOSITE

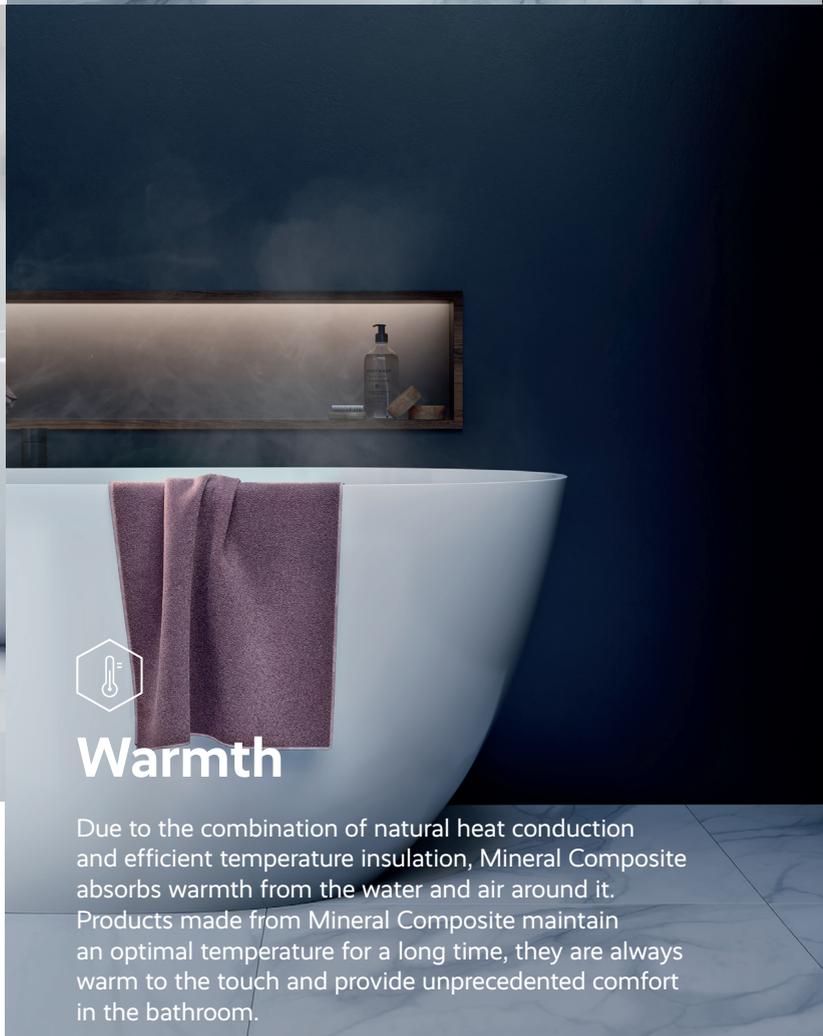

Durability

Mineral Composite is a unique structure, where the dolomite stone is reinforced with flexible binder of resin which ensures resistance under load, damage from impact and the effects of high and low temperatures. It guarantees security of transport, installation and everyday use. Products remain in a brand-new condition for many years.

Precision

With a 0-to+3 mm tolerance, and a minimum radius of 2 mm, Mineral Composite enables an extensive range of shapes to be created that frees up the imagination of designers. Radii, dimensions and edges cease to be a challenge and material precision is easy to achieve. Perfect fit to furniture and shower enclosures go beyond any other traditional material.

Warmth

Due to the combination of natural heat conduction and efficient temperature insulation, Mineral Composite absorbs warmth from the water and air around it. Products made from Mineral Composite maintain an optimal temperature for a long time, they are always warm to the touch and provide unprecedented comfort in the bathroom.

Design Flexibility

The material's innovative structure gives freedom of form, therefore countless designs are available. It offers variety of absolutely unique shapes in classic and modern style. Natural stone surfaces and thin walls are the elements of excellence that set Mineral Composite apart.

Superior Finish

Thanks to smooth finish, Mineral Composite products are always pleasant to the touch. Our sinks, shower pans and bathtubs are resistant to even the most extreme conditions due to the inherent strength of the nanocoat surface. Its insusceptibility to bacterial growth, absorption of water and chemical substances, ensures a long lasting quality and ease of care.

Sound Insulation

Mineral Composite offers exceptional acoustic absorption. This feature comes from high particle density contained in the material. It prevents the sound of water striking a surface, and so improves living comfort and convenience of use significantly.
