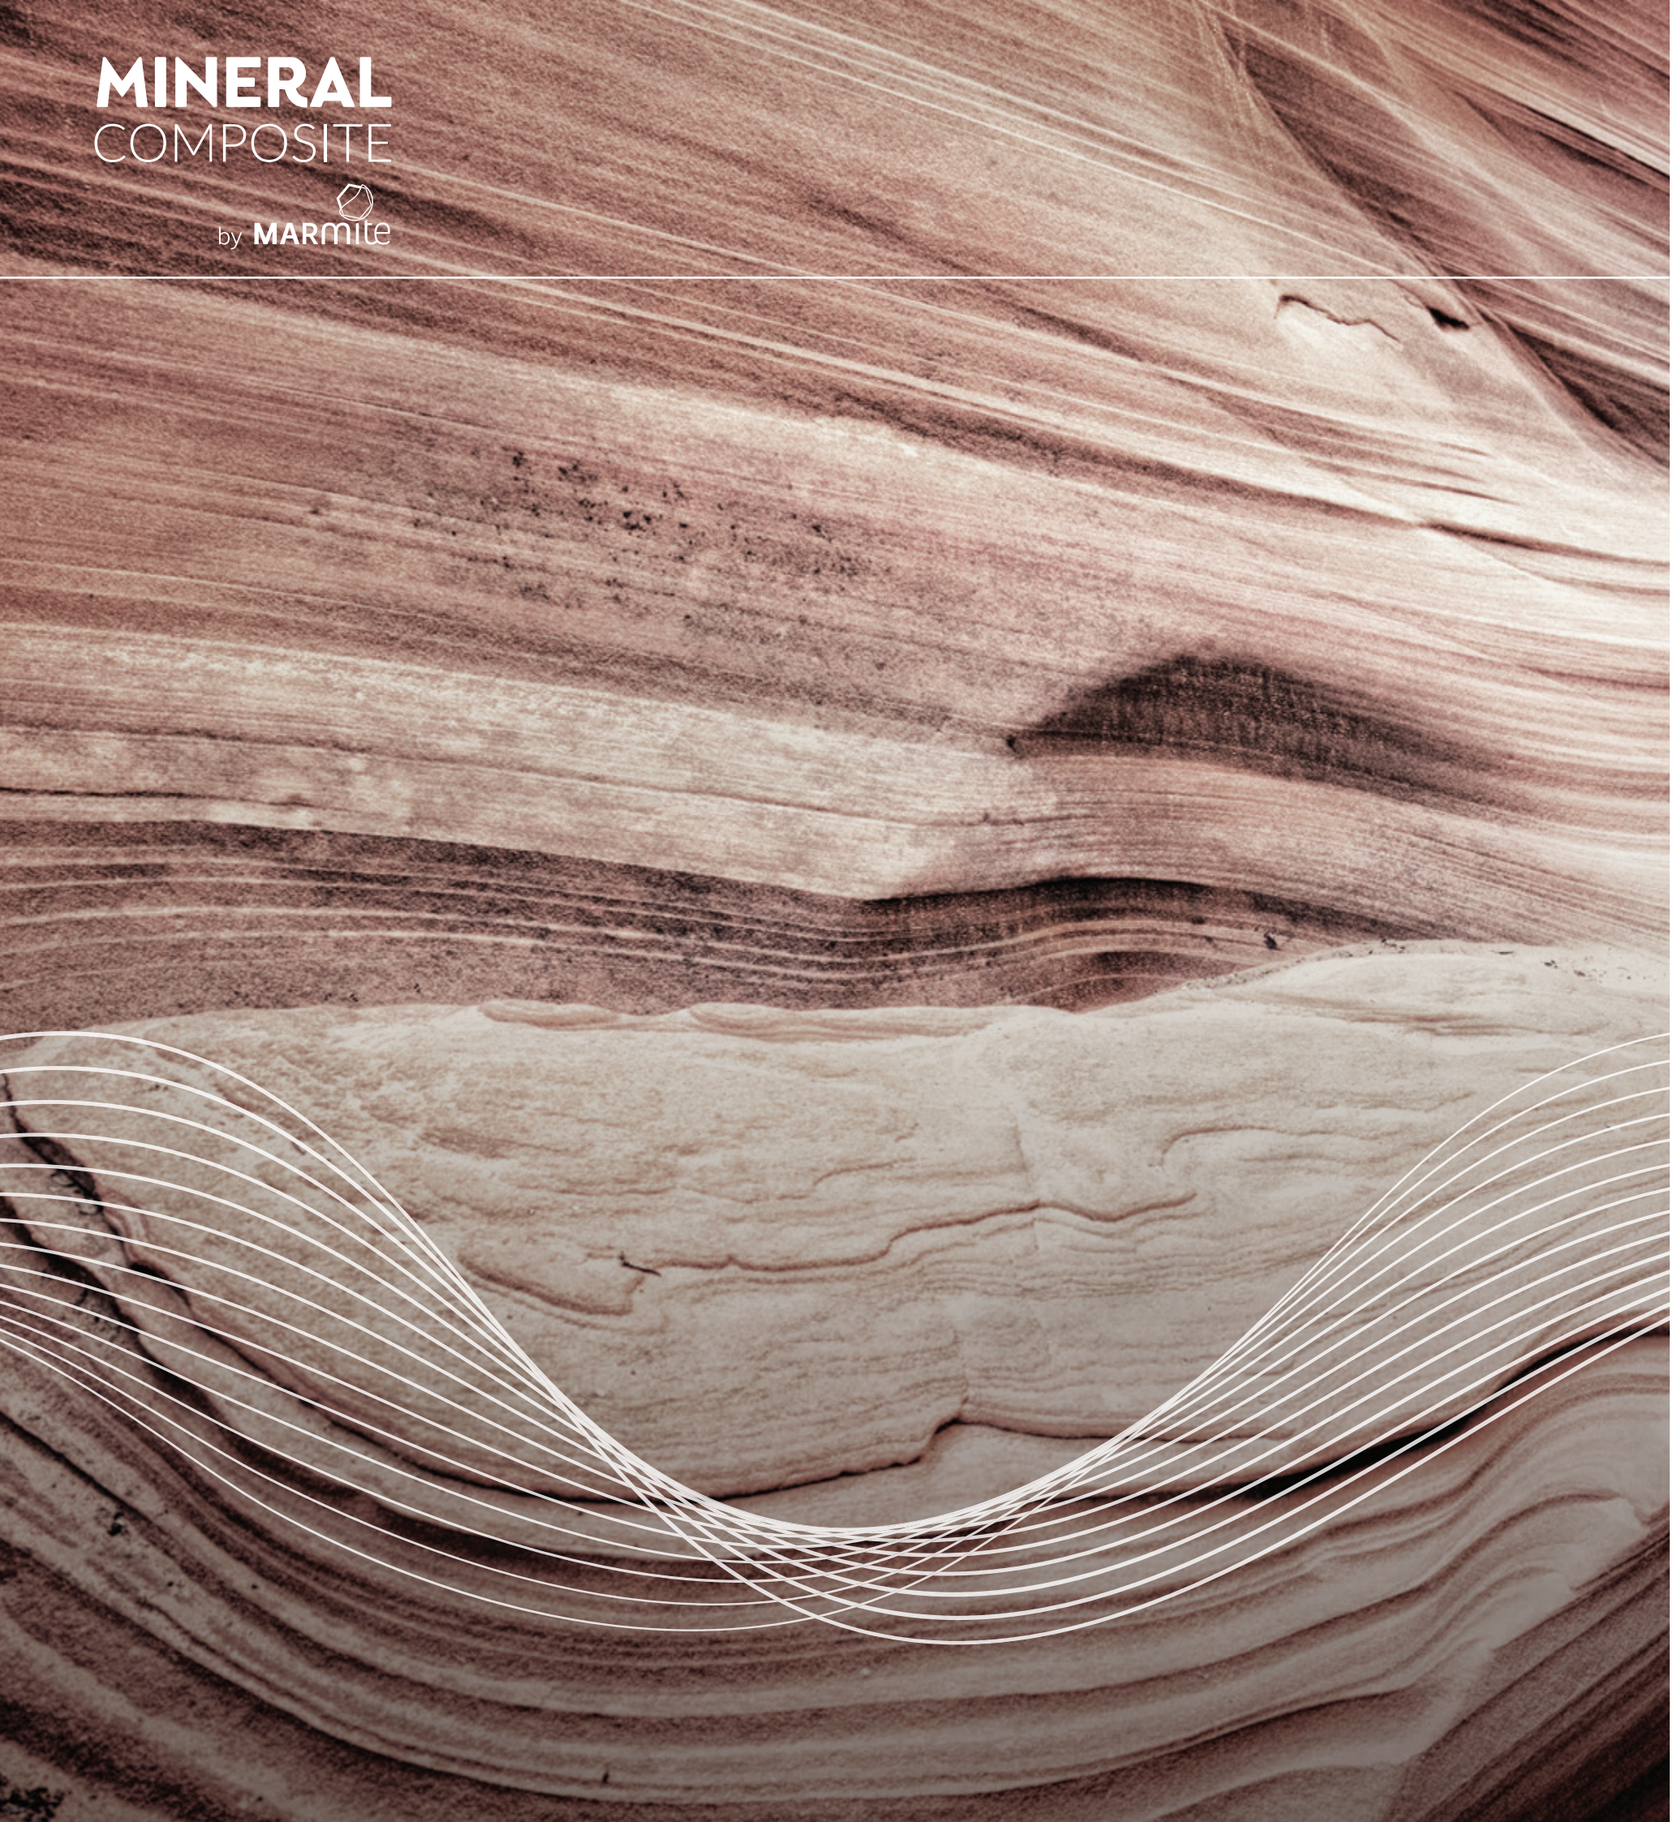
ENG
The beauty of precision.
MARMITE

Marmite designs and creates beautiful, high quality washbasins, bathtubs and shower trays using one of the world's most outstanding materials, Mineral Composite.

The company was founded over 40 years ago in Sweden and this is where our commitment to nature and aesthetics in design began. Today we continue to operate with these same values: creating high quality products with simplicity of rules and processes of production.

MINERAL COMPOSITE

by MARMITE



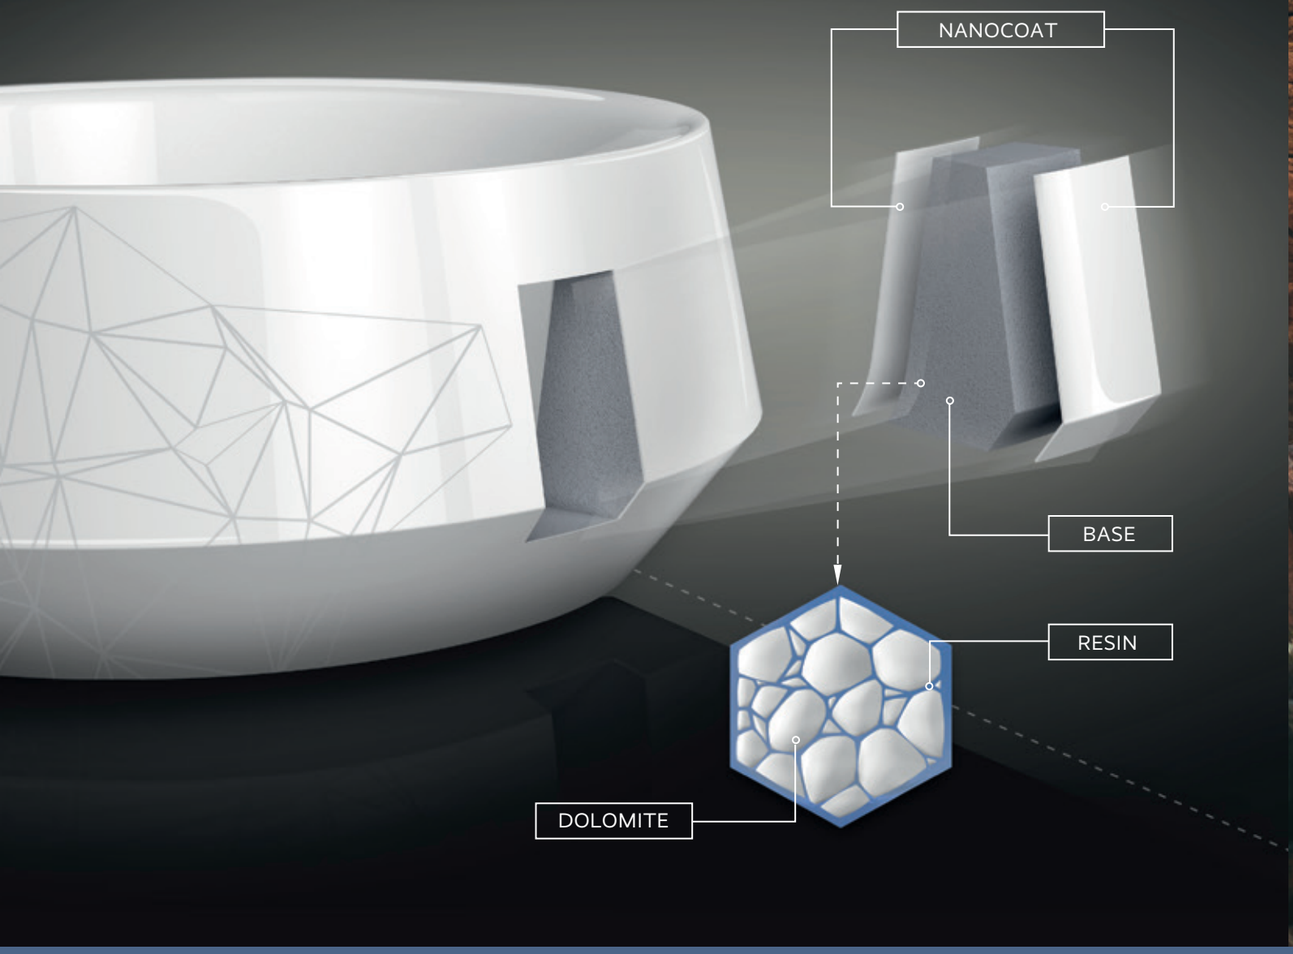
Some 250 million years ago the Earth was a place of much greater volcanic activity than today. Limestone strata were transformed into dolomite under high temperatures and enormous pressures. This rock is a very hard and durable material with superior characteristics. Its main constituent is calcium and magnesium carbonate – $CaMg(CO_3)_2$ – a snow-white mineral with a crystalline structure.

Mineral Composite is a material that fully utilises the extraordinary properties of dolomite. Thanks to technology developed by Marmite, rock that was formed millions of years ago is turned into resistant and beautiful modern products.

The combination of dolomite and elastic resin imparts unparalleled durability and impact-resistance to Mineral Composite. The resin also provides unlimited possibilities for moulding products made from this technology. The external surface is covered with nanocoat. This type of coating is also applied to the surface of yacht hulls and wind turbine blades – places exposed to constant contact with the elements: wind and water.

Mineral Composite was developed thanks to Marmite's 40 years experience. Research and the development of technology has enabled us to create a material that is unique in the market. The environmentally friendly, energy-efficient technological process used to manufacture Mineral Composite is unique in the entire bathroom fixtures industry. The usage characteristics of Mineral Composite are superior to those of traditional materials, which is why it is often called 'the ceramics of the 21st Century'.

Mineral Composite Profile



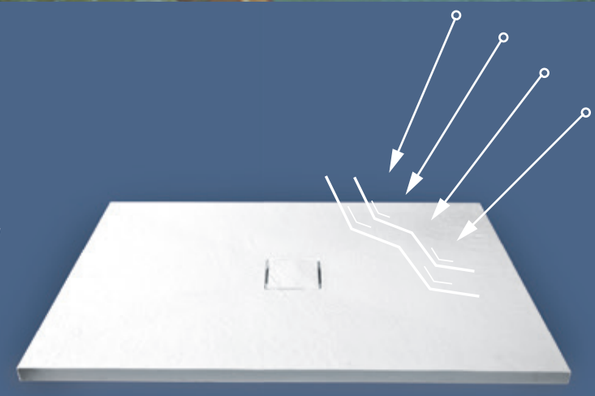
Thanks to its unique structure, based on a combination of nature and technology, Mineral Composite imparts exceptional qualities to Marmite products. The main component of Mineral Composite is dolomite stone. Every Marmite product has a minimum dolomite content of 75%. The crushed stone particles of appropriately varied sizes ideally fill the mould, forming a compact base. The resin added to the base, which envelopes every grain of dolomite, forms a material with a set of properties unparalleled in nature. The process of binding the resin with dolomite, known as crosslinking, enables the material to be permanently formed in any shape imposed upon it. The external layer is nanocoat. Cured resin, mixed homogeneously with pigment and quartz particles, imparts the final finish and smoothness to the product's surface.

MINERAL COMPOSITE

by MARmite

Durability

Mineral Composite is a unique structure which enables dolomite stone to attain a whole new level of durability in the bathroom. The dolomite stone is reinforced with a flexible binder of resin which ensures resistance under load, damage from impact and the effects of high and low temperatures. It guarantees security of transport, installation and everyday use. Products remain in a brand-new condition for many years.



MINERAL
COMPOSITE
by MARMITE

Precision

Mineral Composite is precise by its very nature.
With a 0-to+3 mm tolerance, and a minimum radius of 2 mm, the material enables an extensive range of shapes to be created that frees up the imagination of designers. The liquid mixture of dolomite and resin fills every detail of a mould, perfectly reproducing the design. Radii, dimensions and edges cease to be a challenge and material precision is easy to achieve. Perfect fit to furniture and shower enclosures go beyond any other traditional material.

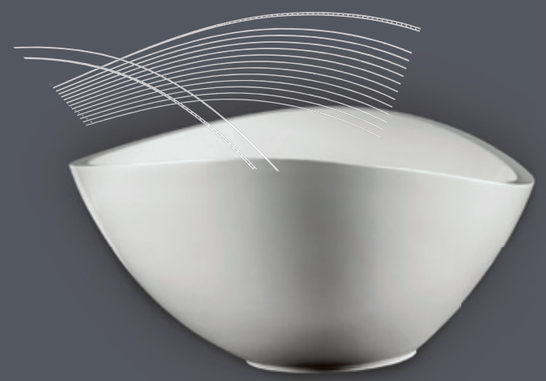
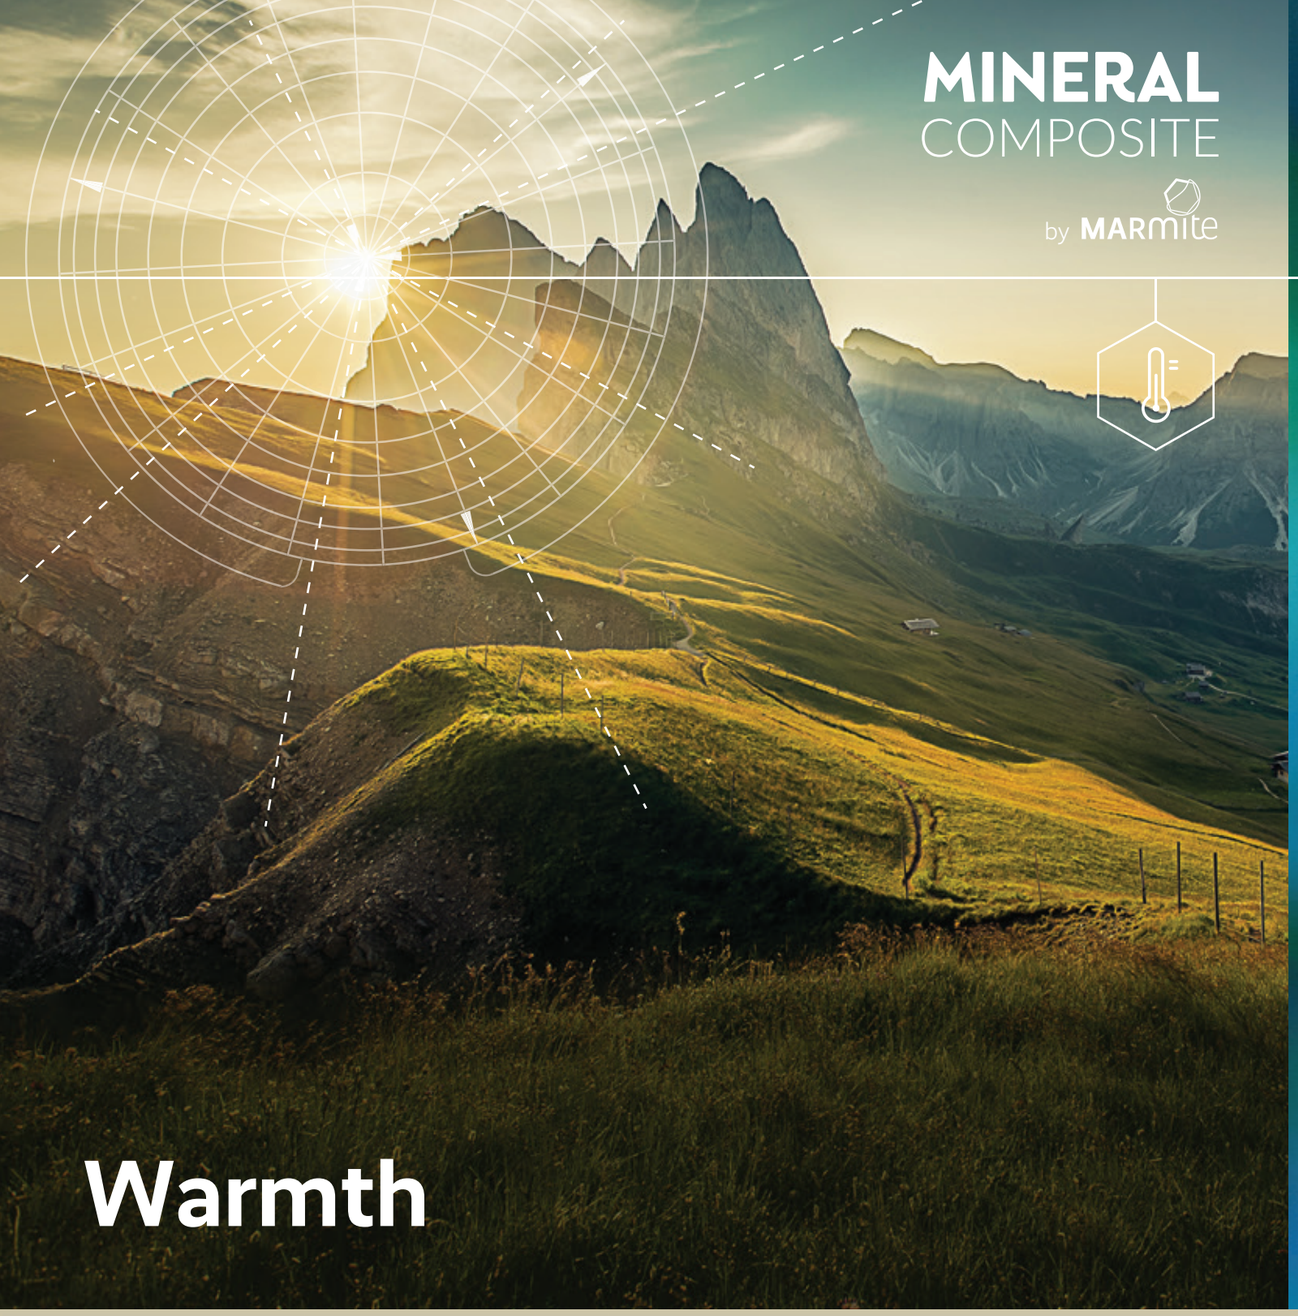
Design Flexibility

Mineral Composite is a material that liberates creativity. Its extraordinary properties allow for unlimited design possibilities. The material's innovative structure gives freedom of form, therefore countless designs are available. It offers variety of absolutely unique shapes in classic and modern style. Natural stone surfaces and thin walls are the elements of excellence that set Mineral Composite apart.



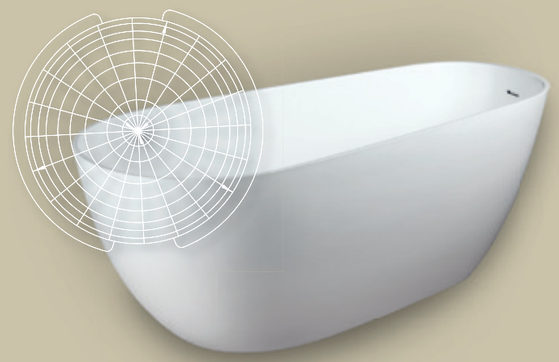
Mineral Composite. Nature in advanced form.

www.mineralcomposite.com



Warmth

The materials used in Mineral Composite are dolomite and nanocoat, imparting unique thermal properties to our products. Due to the combination of natural heat conduction and efficient temperature insulation, Mineral Composite absorbs warmth from the water and air around it.
Products made from Mineral Composite maintain an optimal temperature for a long time, they are always warm to the touch and provide unprecedented comfort in the bathroom.

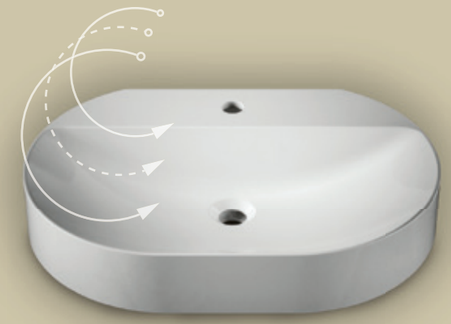


Mineral Composite. Nature in advanced form.

www.mineralcomposite.com

Superior Finish

Just one touch and you'll feel the nature inherent in our material. Bathtubs, washbasins and shower trays made from Mineral Composite are pleasant to the touch and have a smooth finish. They are resistant to even the most extreme conditions due to the inherent strength of the nanocoat surface. Its insusceptibility to bacterial growth, absorption of water and chemical substances, ensures a long lasting quality and ease of care.



Mineral Composite. Nature in advanced form.

www.mineralcomposite.com

Sound Insulation

Mineral Composite offers exceptional acoustic absorption. This feature comes from high particle density contained in the material. It prevents the sound of water striking a surface, and so improves living comfort and convenience of use significantly.

evermite.2

Great changes have small beginnings. In 2012 Marmite introduced Evermite, a new surface that combines durability with design flexibility. We continuously work to develop this technology and today we proudly introduce Evermite.2, a new improved multi-tasking surface, for professional use.
Thanks to its unique nano composite formula Evermite.2 is more durable, providing resistance against scratches and stains. It gives full freedom of form. It can for the first time be applied to all washbasins, shower trays and bathtubs, including designs manufactured using Hand Finish technology.
Our Nano Revolution has begun.

N·A·N·O
REVOLUTION

- more resistant to scratching
- more resistant to discoloration
- more flexible in shape

Private label

Partnerships

The main competence of the company is to manufacture products for private label and OEM. We provide bespoke products with a competitive edge. Our comprehensive support services for customers include product design, own branding and individual packaging. We collaborate with our partners to review existing product portfolios, to improve design, quality and profitability, offering a real alternative to branded goods.

Marmite is dedicated to building long term relationships with its customers. Our Sales Managers and Customer Service team liaise to ensure customers needs are met. Processes are clarified and a clear exchange of information is the key to our success. Customers are kept informed at each stage from design approval, through to production and timely delivery.

About us

We are proud to welcome customers to our manufacturing plant in Poland, on a single site of 35,000m^2. Here we employ 700 people and operate 7 fully integrated production lines for washbasins, bathtubs and shower trays.
Our investment in technology means our manufacturing is perfectly suited to both large and smaller production volumes. Our production capacity per annum is in excess of 1,400,000 units. The company has an international presence, selling across 35 countries.

Consistent and accurate quality of manufacture is ensured with our investment in bespoke mould production. We operate a fast lead time from order to dispatch.

Design and Innovation

Marmite continually invests in new solutions for product design and technology, production processes and product surfaces.

Our dedicated design team prepares bespoke tailor-made projects. The rapid and cost effective new product development process provides full design and technical support. We co-create with the customer at every stage of the design process. Design projects are delivered to customers within 2 weeks which, after first revisions, may be developed into a prototype immediately. From the customer's approval of a design to the start of manufacture of a new product is just 12 weeks.

In addition, the company has a portfolio of 500 commercially available products, many of which have received global awards for design.
